

HydroTex Opens New Pump Service Center in Deer Park

For more than twenty-five years, HydroTex has provided high-quality pump repair service to all industries from its location in northwest Houston. On December 1st, HydroTex opened a new facility in Deer Park, Texas, in the heart of Houston's busy ship channel area. With this new location, HydroTex will be able to provide faster and more convenient service to pump users in the petroleum and petrochemical industries located along the busy Houston Ship Channel area. *"With the opening of our Deer Park facility, we intend to provide high-quality rapid response pump repair to our customers to help minimize their pump down time,"* said Jim Shaffer, president of HydroTex. The HydroTex main facility will continue to provide pump repairs, engineering, upgrades/modifications on multi-stage split case pumps for all industries and to their power generation customers, while the new Deer Park facility will focus on servicing the petroleum and petrochemical customers along the ship channel and surrounding areas. Deer Park will also repair and upgrade industrial and municipal pumps.

HydroTex Dynamics, Inc. is a subsidiary of Hydro Inc., one of the nation's leaders in pump repair technology, which was established in Chicago in 1969. In addition to the new facility in the Houston area, the Hydro companies currently have other locations across the U.S. and internationally.

To schedule a shop tour of the new Deer Park facility, contact Tina Vodar at 630-217-7249 or send an email through the HydroTex website contact form.
