

Hydro East Service Center Moves to Larger Facility

To better assist its customers in the Northeast and Mid-Atlantic regions, Hydro East Inc. (a division of Hydro Inc., a Chicago-based corporation), announced its move to a new facility in Aston, Pennsylvania, on October 1, 2007. This modern 27,000 square-foot plant is located in a nearby suburb of Philadelphia, convenient to major transportation facilities.

Hydro East is a leader in pump repair for the power generation, petroleum, industrial, and municipal markets.

With this enlarged facility and new state-of-the-art equipment, Hydro East offers pump users along the East Coast more options and capabilities for addressing their pump problems.

The new building provides a crane capacity of more than 75 tons so Hydro East can more efficiently repair large circulating water, river water, vertical turbine, and other pumps that require a heavier crane capacity. With the new facility and the experienced staff, Hydro East is well positioned to service their customers 24/7 and to recommend repair options to increase pump reliability and performance.

To tour the new facility or to find out more about Hydro East's comprehensive services, call Maura Fisher at 610-334-4421 or send an email through the Hydro East contact form.
