

Vibration Training with Mechanical Solutions

In June 2011, Mechanical Solutions worked with Hydro to provide pump users with a free course on Pump Vibration Training. Hosted at the HydroAire 40th St. service center, material was co-presented by Bill Marscher and Eric Olson from Mechanical Solutions Inc. (MSI). The first training seminar was so successful that another one was scheduled and well attended in November 2011.

This vibration training seminar focuses on pump troubleshooting using vibration and other specialized testing and analysis techniques. The course, which is a condensed version of the class previously presented at the 2011 Pump Symposium, covers vibration analysis, testing and evaluation, and provides an overview of when and how to apply them. Hydro plans to host another MSI Vibration Training seminar on October 16 & 17th, 2012. To reserve your seat for this training course, contact the seminar coordinator, Christine Barger, by calling 630-947-4039 or visit <http://www.hydroinc.com/pump-training-seminars> for information on upcoming pump training events.
