

State of the Art Parts- Expedited Stuffing Boxes

Hydro Parts Solutions recently manufactured two stuffing boxes for an injection pump at a Gulf Coast refinery.

An issue at the refinery had caused two of the stuffing boxes for this application to fail. Because of this unexpected failure, the end user required six new stuffing boxes on an expedited basis.

Hydro Parts Solutions was able to reverse engineer and machine these components from AISI 4140 steel on an aggressive timeline, providing the first two stuffing boxes within 4 days. The remaining four components were completed within 9 days.
