

HYDRO ENERGY EDGE

Efficiency. Reliability. Sustainability.

Sustainability is in our DNA.

As the largest independent pump rebuilder in the world, Hydro has spent the past 55 years partnering with our customers to prove that new is not always better and that an engineered rebuild can improve upon the original design to deliver safer, more reliable, more efficient operation.

Energy savings through a holistic approach to more efficient operations.

Energy Edge combines Hydro's comprehensive services into a customized program that identifies opportunities for energy savings and supports end users in achieving their reliability and sustainability goals.

Reducing parasitic energy losses and increasing energy efficiency does more than just help your organization reach published climate goals. It also provides you with a competitive edge by reducing operating costs, eliminating downtime events, and increasing mean-time-between-repair for pumps, motors, and valves.

Some of the services available as part of the Energy Edge program include:

- ⚡ Energy Audits Through Field Testing
- ⚡ Comprehensive System Analysis
- ⚡ Hydraulic Modifications to Optimize Performance and Energy Usage
- ⚡ Upgraded Tolerances and Materials
- ⚡ Certified Performance Testing
- ⚡ Continuous Performance and Reliability Monitoring

Let's do this.

Get in touch to learn how Hydro's energy savings program can help you achieve your reliability and sustainability goals.

About Us

Our mission is to work hand-in-hand with our valued customers to optimize the performance and reliability of their pumping systems by evaluating and understanding root causes of pump degradation or failure and by providing unbiased engineering analysis, quality workmanship, and responsive field service for improved plant operation.
