

Centaur Hardware for Every Application

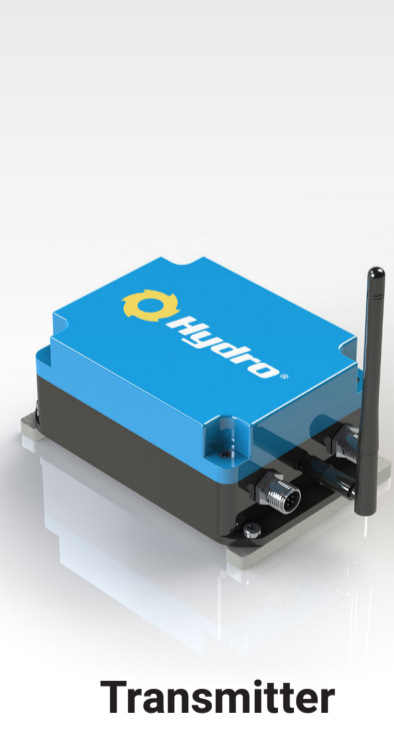

Centaur's hardware is designed with the end-user in mind. Whether you need wireless sensors for troubleshooting a complex condition or a gateway with the flexibility to operate without a wireless network or external power source, Centaur's comprehensive suite of hardware products can deliver the data you need to improve operations.

Collect. Detect. Protect.

Designed for ease of installation and maintenance, Centaur uses wireless sensors to collect information, such as pressure, vibration, and temperature. These sensors are connected to a wireless gateway.

The gateway then transmits collected information to the cloud using cellular, Wi-Fi, or a wired connection. On the cloud, data is stored and analyzed using powerful AI-driven algorithms. This data can be accessed remotely by plant personnel and Hydro's engineers.
